The nNR7 and nNR7 l proteins are useful in the identification of downstream target genes and ligands regulation activity. The nuclear receptor is involved in the regulation of in vicell proliferation and/or cell development. The nNR7 and nNR7-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 9: Fig 1A-C: 80pp; English.

Mucleic acid vectors encoding for expression of a VDRR polypeptide can be used for treating metabolic, proliferative or inflammatory conditions, by introducing them into a mammal. The introduced nucleic acid is then capable of transforming a cell in vivo and then polypeptide is expressed. A substance affecting VDRR signal transduction, such as an agonist or antagonist can be used for the manufacture of a medicament for treating metabolic, proliferative or inflammatory condition.

N.B. The specification specifically claims the VDRR nucleic acid and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a human vitamin D receptor related (VDRR) polypeptide. Human VDRR polypeptides and substances which affect VDRR signal transduction, can be used for treating metabolic, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N.B. The specification specifically claims the VDRR nucleic polypeptide sequences given in figures 1, 4, 7 and 8, but no are given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or inflammatory conditions. They can be used in the manufacture of a modicament for treating the following conditions: obesity, diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ¥5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hyperlipoproteinaemia and osteoporosis, rheumatoid arthritis, benign and

SXR (i) forms a heterodimer with rethnoid X receptor (RXR). (ii) binds to a direct or inverted repeat response element motif based on the half-site AGTTCA, (iii) activates
                                                                                                                                                                                        involved in undesirable drug interactions. Antibodies specific for

                                                                                                                                                                                                                                                                                                                Sequence 1422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                18-MAY-1999
                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a human intranuclear receptor protein. The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment.

The nucloic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment of various diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ž

The specification describes a human intranuclear receptor protein The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment of various diseases. The present sequence was used in the course of the income diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (NISB ) JAPAN TOBACCO
